CYBER SECURITY SERVICES

System Overview

Stamina is a service that provides audit, consultancy and enforcement services on cyber security. Within the scope of the service, cyber security vulnerabilities of institutions and organizations are regularly audited and reported by expert teams, and consultancy is provided on preventive measures.

Activities

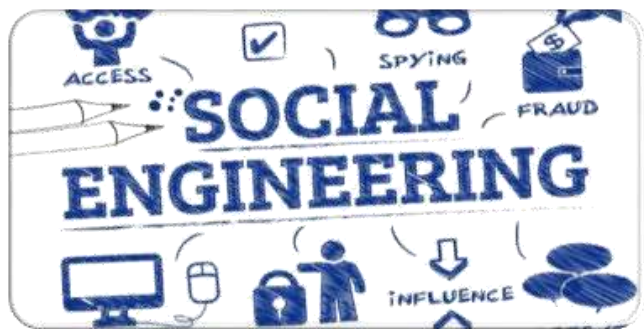

Penetration Test is the service of testing, reporting and providing related solutions against all attacks that the target organization may be exposed to from inside or outside, such as hardware, software, network that make up the information systems of the institutions.

In DOS and DDOS Attacks, it is aimed to disrupt the system and render it inoperable by sending instant requests over multiple machines, with a pressure far above the load that the system can handle.

Performance Test is the service of testing the performance and load of industrial systems, information technology infrastructures, servers or software and applications.

Social Engineering is an awareness raising service to managers, employees, and especially new hires of any kind.

Vulnerability Analysis is performed to draw attention to vulnerabilities in hardware, software and human factors.
