

Stamina, an integrated system solution, detects the target via its radar remotely and identifies by means of day and thermal cameras. Targets trying to cross the border are detected by seismic sensors. Data collected from radar, cameras and seismic sensors can be instantly transferred to the command & control center via fiber infrastructure or radiolinks. Solar energy, city grid or generator can be used as a power source, depending on the land, climate and infrastructure conditions.

It is very ideal for the protection of the following areas:

- Border
- Critical Facility
- Pipeline
- Coast
- Water Reservoir
